## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election of Group II, claims 7-12, in the reply filed on June 14, 2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 1-6 and 13-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on June 14, 2004.

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 7-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rand et al, US 5,960,414.

Rand discloses a computer implemented system for redistributing a part, e.g.

Figs. 2-4, regarding excess inventory from actual inventory. Applicant is reminded that intended use claim language, e.g. for redistributing, is given patentable weight, but less patentable weight than positively recited claim language, e.g. a system.

It is noted that Applicant's claim language comprises a positively recited system followed by intended claim language. Official Notice is taken that defining a plurality of locations and transferring an inventory part from one location to another location has been common knowledge in the inventory art. To have provided such for Rand would have been obvious to one of ordinary skill in the art. The motivation for having done such would have been to implement common knowledge part redistribution when moving inventory. Rand inherently comprises processing units and computer programming to optimize the redistributing of excess part inventory.

5. Further pertinent references of interest are noted on the attached PTO-892.
6. It is noted Applicant submitted an Information Disclosure Statement (IDS) on January 30, 2002. However, no form PTO-1449 was included with the IDS. Thus, no Applicant provided art was reviewed by the Examiner.
